

Carriage Roller

Carriage Roller - Carriage rollers are specifically designed bearings which are utilized on lift masts to be able to help them perform within tough environmental conditions. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This equipment is frequently exposed to environmental influences such as heat, dust, cold, moisture, contamination and aggressive ambient air. Therefore, the lift masts' guidance arrangements must be specifically tough and have a specific high load carrying capacity.

To help compete in lots of various environmental conditions, carriage rollers were designed for a lot of lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
